Dawan Sawyer | New York, NY

Email: dawansawyer@gmail.com

Portfolio: dawansawyer.vercel.app | **Linkedin**: linkedin.com/in/dawan-s | **GitHub**: github.com/sawyer0

PROFESSIONAL SUMMARY | *(open to in-person or hybrid roles in NYC)*

AI-native full stack engineer who ships production agentic systems, fast frontends, and reliable data pipelines. Building LangGraph agents at Gesture since June 2026; previously founding engineer at PYE Education, where I cut the main JS bundle 87%.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Frontend: React, Next.js, Webpack

Backend & Infra: Node.js, PostgreSQL, Supabase, CI/CD, Redis, Airflow

AI & Tooling: LangGraph, FastAPI, BigQuery, Jest, Vitest, AJV

EDUCATION

Borough of Manhattan Community College
A.S. Engineering Science (May 2028)

UPenn Coding Bootcamp
Full Stack Web Development (MERN)

EXPERIENCE

Full Stack AI Developer | Gesture US Inc *(Jun 2026 – Present)*

- Shipped a production AI agent (LangGraph + FastAPI, ~20 nodes on shared state) used by ~15 marketers: ~1,150 conversations in 4-week rollout, 93% resolved without human escalation at 3.4 LLM round-trips each
- Ensured 0 duplicate or wrong writes during rollout: 2 independent human approvals per write via graph edges, in-node guard, Redis distributed locking, and post-write verification
- Protected budget reporting for ~170 contracts (~2,300 campaigns) by fixing a precision bug on endpoints serving ~550 req/day, preventing ~$120/mo discrepancy, and fixing a row cap showing wrong top-10 rankings for 17 segments
- Maintained identity enrichment within budget via Airflow DAG (~2,900 initial records) with idempotent reruns, billing error classification, and global spend cap; dedupe saved ~$260 in repeat API charges

Founding Engineer | PYE Education *(Jan 2026 – Jun 2026)*

- Led end-to-end infrastructure and frontend migration, stabilizing deployments and cutting codebase complexity 70%
- Built unified JSON-driven engine, replacing 50+ hardcoded files with 4 reusable systems for non-developer content creation
- Optimized performance via code splitting and Webpack prefetching, reducing main JS bundle 87% for near-instant navigation
- Implemented standardized components and automated schema validation, preserving structural integrity while accelerating lesson creation 5x
